

Business Technology Assessment

Business-Centric IT Planning

OUTSOURCEIT

Critical Questions. Critical Answers.

Never before has more information been available in the business environment. Most business executives don't have the time or resources to research the ever-changing technology environment. Too often a "quick fix" solution is employed without planning for long-term impact. With a Business Technology Assessment, OUTSOURCEIT will identify gaps that may exist between your current technology and what your business needs to be successful. We begin by asking three critical questions:

What do you need technology to do?

This is the most critical question that is often overlooked by focusing on what the latest technology *can* do, rather than what it *needs* to do for your business. OUTSOURCEIT specializes in aligning the right IT solutions with the needs of your organization by digging deeper into your business objectives.

What technology is currently in place?

Our highly trained team will evaluate your current systems and processes. This step will identify gaps that are not aligned with the best practices of similar business sectors and your organization's objectives.

Our specialists provide network-centric inventory of your environment including:

- Hardware Infrastructure
- Database Management Systems
- Operating Systems
- Business Applications
- Lifecycle Assessment
- Communication Infrastructure

Do you currently have the people, processes and technology in place to achieve your objectives?

The most well-considered IT project will fail unless you give equal weight to these factors. Our comprehensive assessment addresses configuration, common errors, capacity planning, and infrastructure to identify gaps between your current IT environment and your short-term and long-term objectives.

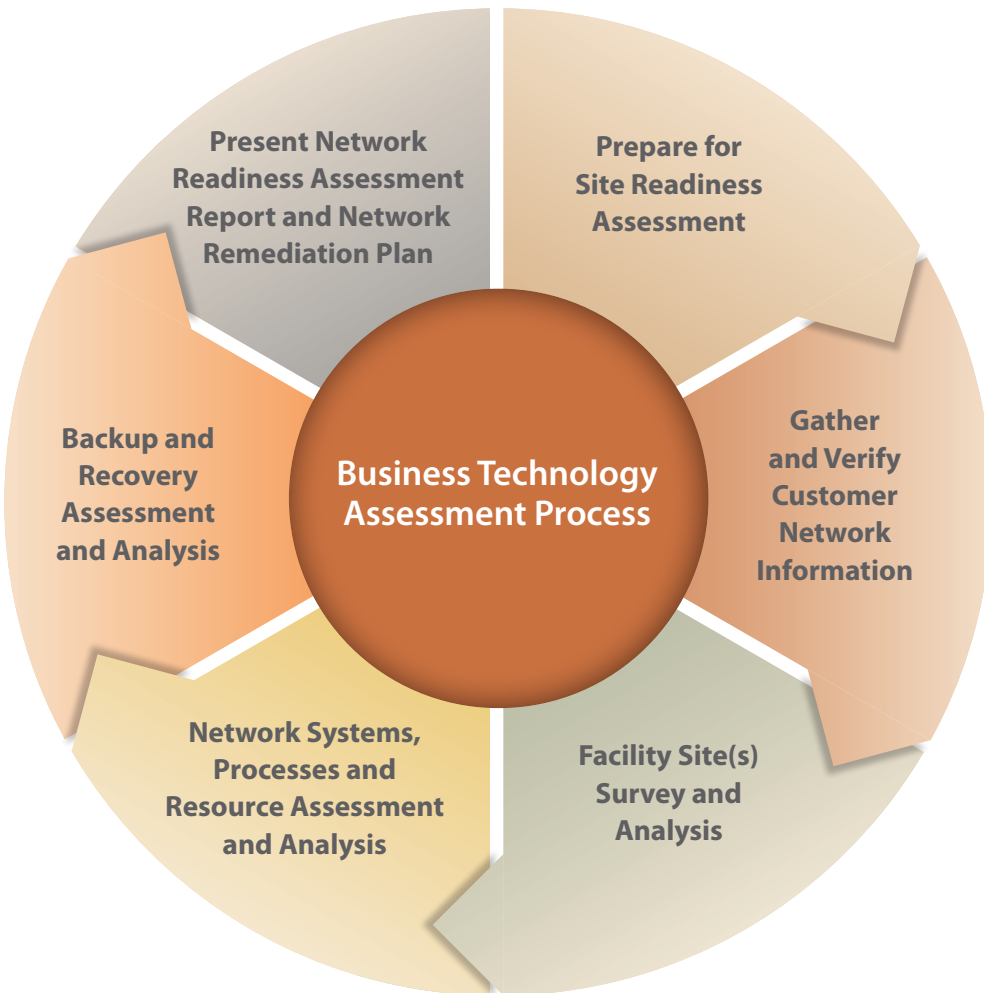

Better Today. Better Tomorrow.

Investing in knowledgeable consultants on the front end reduces your total cost of ownership over time. Our highly trained team will develop a comprehensive overview of your current systems and prepare recommendations that meet your organization's objectives. Our extensive industry knowledge and certifications ensure your IT infrastructure operates more efficiently today and is prepared for the future.

Benefits

- Increase efficiencies and processes
- Maximize current infrastructure and resources
- Identify available software and hardware updates
- Identify potential security and encryption weakness
- Reduce total cost of ownership
- Develop plan for network scalability and growth

OUTSOURCEIT helps ensure your business is more efficient today and prepared for the future.
