

Hosted Microsoft® Small Business Server 2011

Enterprise-Class Server Solution
For Small Businesses

OUTSOURCEIT

Get More Protection and Security for Less

Designed and priced for small businesses with up to 75 users, OUTSOURCEIT's hosted Microsoft Small Business Server 2011 delivers enterprise-class server technology in an affordable, all-in-one solution. Our hosted solution can increase your productivity, lower costs, increase accessibility, and provide the environmental redundancies and securities only made available to SAS 70 Type II certified data centers.

Maximize Scalability with Ease

As your business needs change, hosted Microsoft Small Business Server 2011 enables your organization to grow and meet the changing demands with a highly scalable platform. Easily add users, servers, additional applications, or expand into other Microsoft technologies. Our solution also allows for connectivity scalability through a redundant network of data center ISPs, allowing for scalable user growth and requirements.

Increase Productivity and Reliability

Our hosted solution increases business productivity with enhanced Microsoft online collaboration capabilities built in, including SharePoint, Exchange, File and Print services, and Remote Web Access. These services are available virtually anywhere you have internet access and are always in a reliable state through the connectivity and hosting at the OUTSOURCEIT data center.

Most in-house solutions are susceptible to failure of a single device, whether that is a router, firewall, switch, ISP, or the server itself; however, a hosted Small Business Server through OUTSOURCEIT

has none of these single points of failure. Our servers are set within a fully redundant infrastructure consisting of enterprise switches and firewalls and are constantly monitored by OUTSOURCEIT. The data center provides N+1 redundancy of unmetered bandwidth, environmental control systems, and facility power – ensuring that your data is reliable and available 99.9% of the time.

Reduce Overhead and Control Costs

In-house server solutions require internal resources to manage and maintain assets and costs including renewing warranties, replacing hardware, purchasing licenses, and updating equipment. OUTSOURCEIT's certified professionals take care of these responsibilities for you, saving you time, headaches, and personnel expenses. Plus, with no hardware or software to purchase and a fixed monthly cost, you can dedicate more capital to your business.

Benefits

- Synchronized business applications and increased data efficiency
- Easy data access from remote and mobile devices
- Confidence that all data and applications are secure and backed up daily
- Unmetered bandwidth for greater productivity
- Greater security with enterprise-level spam and virus filtering for email
